Log Cabin

This block can be constructed using any number of fabric, and even made completely of scraps. For a light and dark block like the ones shown here, 7 fabrics are needed. Three light, three dark, and one for the center.

There will be options for both a 7" block and a 3.5" block on the following pages. I've included multiple methods of construction for both those size.

For Rotary Cutting - seam allowances included in the measurements. You will see a pattern forming with the measurements. The 7" block was designed using 1.5" strips of fabric for each "log". The 3.5" block will use 1" strips of fabric. It would be easy to make either of these larger simply by adding more logs.
